

## Why You Should Consider Mobile Video Solutions for Freight Trucks

Mobile video solutions are becoming more commonplace in the freight/trucking industry. Drivers are hauling valuable goods for hundreds of miles, and transportation directors need to ensure their drivers make those deliveries while following proper procedures, keeping the drivers and others around them safe.

Likewise, the roads are littered with distracted and negligent drivers, so having cameras capturing the journey tells the whole story, exonerating your driver from false claims.

### Why Consider Mobile Video Solution?

There are several reasons for considering a mobile video solution for your freight truck.

#### Safety

The biggest reason to implement a mobile video solution is to keep everyone safe, including drivers and those around the drivers. [In 2016, a study by the Insurance Institute for Highway Safety](#) found tractor-trailer trucks account for more deaths (2,920) than single-unit trucks (826). The study also found “speeding of any kind” was the most common driver-related factor for large truck drivers, while “distraction/inattention” was the second most common.

Additionally, having side and rear cameras helps drivers navigate congested areas and reduces accidents, thus reducing downtime to make repairs and keeping your fleet running at maximum efficiency.

## Exonerate Drivers

When driving at high speeds on freeways, accidents can happen in an instant. It can be difficult for drivers to remember the incident exactly how it happened. However, with 360° coverage surrounding your vehicles, you will have video evidence as to how any accident happened. Video solutions protect your drivers from false claims and save you money on unnecessary litigation costs.

## Tell the Whole Story

Everyone wants to know the truth, and mobile video solutions provide that. With multiple camera angles and cameras focused on the road and drivers, you can get all the details should an incident occur.

## Monitor Cargo

Deter shrinkage and provide your drivers with a view to monitor high-value cargo. For transportation directors, it gives them video evidence that a delivery was made.

## Coach/Train Drivers

Delivery footage is great for training new employees or revisiting safety procedures with current employees. Ensure proper protocols are being followed and correct unsafe driver behavior with real-world lessons.

Mobile video solutions help protect your drivers and your cargo to document that the journey was made safely.

### About Pro-Vision

Founded in 2003, Pro-Vision is a leading video technology solutions provider trusted by thousands of organizations in 58 countries. Pro-Vision solutions include vehicle video recording systems, body-worn cameras, data management and cloud-based storage solutions. Pro-Vision's transit, law enforcement and commercial partners utilize these solutions to enhance safety, increase productivity and protect critical assets.
