

4 Reasons Why You Should Equip Your Concrete Trucks With a Mobile Video Solution

Mobile video solutions are becoming more commonplace for concrete trucks. Construction managers need to ensure their workers are following proper procedures, making the job site a safe place for concrete truck drivers and others around them.

Likewise, the roads on the way to the job site are littered with distracted and negligent drivers, so having cameras capturing the journey tells the whole story, exonerating your driver from false claims.

Why Consider a Mobile Video Solution?

There are several reasons for considering a mobile video solution for your concrete trucks.

Safety

The biggest reason to implement a mobile video solution is to keep everyone safe, including drivers and those around the drivers. Because of the top-heavy nature of concrete trucks, rollovers are a common problem. [A 2017 survey by the National Ready Mixed Concrete Association](#) found 87% of reported rollovers were single-vehicle accidents, and the driver was deemed to have caused the rollover 75% of the time.

Fifty-six percent of rollovers occurred in trucks that were traveling straight ahead, 33% happened when the driver was turning left or right and 5% happened when the truck wasn't moving at all.

The survey also found most rollovers happened on rural roads (30%), but a significant amount also happened at job sites (27%).

Having side and rear cameras helps drivers navigate congested areas and reduces accidents, thus reducing downtime to make repairs and keeping your fleet running at maximum efficiency.

Exonerate Drivers

When driving at high speeds on freeways, accidents can happen in an instant. It can be difficult for drivers to remember the incident exactly how it happened. However, with 360° coverage surrounding your vehicles, you will have video evidence as to how any accident happened. Video solutions protect your drivers from false claims and save you money on unnecessary litigation costs.

Tell the Whole Story

Everyone wants to know the truth, and mobile video solutions provide that. With multiple camera angles and cameras focused on the road and drivers, you can get all the details should an incident occur.

Coach/Train Drivers

Recorded footage is great for training new employees or revisiting safety procedures with current employees. Ensure proper protocols are being followed and correct unsafe driver behavior with real-world lessons.

From cement mixers and pumpers to dump bodies and everything in between, Pro-Vision has the scalable and versatile hardware solution to fit each of your vehicles.

About Pro-Vision

Founded in 2003, Pro-Vision is a leading video technology solutions provider trusted by thousands of organizations in 58 countries. Pro-Vision solutions include vehicle video recording systems, body-worn cameras, data management and cloud-based storage solutions. Pro-Vision's transit, law enforcement and commercial partners utilize these solutions to enhance safety, increase productivity and protect critical assets.
