

Breaking Down the Cameras of a Mobile Video Solution for Private Security Services

Mobile video solutions are becoming more commonplace in the security industry. While the interactions within the security industry differ slightly from those in law enforcement, the reasons for implementing a mobile video solution are fairly similar.

Security officers may have to defuse an altercation between civilians or chase after a perpetrator just like a police officer. The significant difference is security officers don't respond to 911 calls or other emergencies but still could be involved in other high-pressure situations.

What is a Mobile Video Solution?

Simply put, a mobile video solution is a set of cameras and DVRs (digital video recorders) implemented to record around moving objects, whether it's side-, rear- and forward-facing cameras on a vehicle or a body-worn camera on an officer. This differs from CCTV, which is stationary and only records one specific area.

Body-worn Cameras Capture Every Detail

Body-worn cameras, typically mounted on the officer's upper chest, are designed to closely replicate the officer's point of view. Some body-worn cameras can be attached to sunglasses or the brim of a baseball cap, but those cameras can be easily removed during an altercation, so depending on the environment, they may not be the best option.

Security officers deal with civilians and need a camera that cannot be easily removed. The last thing an officer needs to worry about is whether their camera that was forcibly removed recorded the incident at hand.

Vehicle Cameras Offer 360° Coverage

In addition to body-worn cameras, security companies could opt to install cameras on their vehicles. These cameras, which record on each exterior side as well as the interior, monitor incidents from every angle to give you 360° coverage.

Continuous recording can be set up to record as soon as the ignition switch is on and stay on for a set number of minutes after the ignition is off, meaning you won't miss a crucial event. Some mobile video solutions also include a monitor in the vehicle so the driver can see their blind spots for maneuvers such as reversing or making tight turns.

Whether it's patrol or guard services, bodyguard or surveillance officers, Pro-Vision's mobile video solutions protect your personnel and give them the tools they need to do their jobs effectively.

About Pro-Vision

Founded in 2003, Pro-Vision is a leading video technology solutions provider trusted by thousands of organizations in 58 countries. Pro-Vision solutions include vehicle video recording systems, body-worn cameras, data management and cloud-based storage solutions. Pro-Vision's transit, law enforcement and commercial partners utilize these solutions to enhance safety, increase productivity and protect critical assets.
